Screen System

Fin

Fin uses cutting-edge AluGrip6 technology – a range of supportive feet and connective brackets that securely lock laser-cut panels of 6mm acrylic together. AluGrip6 systems offer unparalleled flexibility and are ideal for use in reception areas, retail spaces, commercial offices, cafes and more.

Float

Float utilises a range of specially-developed aluminium profiles to create a vast array of easy-to-assemble screen systems that are structurally robust whilst remaining elegant and visually inconspicuous.

Free

Free systems are built using strong, aluminium-framed screens and are available in a range of options – static, mobile and portable. All Free systems are highly-stable yet stylish, making them ideal for use in offices, large commercial spaces and production environments.

All the following prices are based upon standard anodised aluminium and 6mm clear acrylic (Panel thickness in **Free** may vary). For prices on other finishes or alternative product arrangements please speak to our sales team.

Fin systems can be supplied with or without access ports and can be manufactured according to client-specific dimensional requirements.
